Suomen Erillisverkot Places Pre-Order for New HYBRID X Operating device – Announcement Made at CCW 2025

BRUSSELS / Belgium, June 17, 2025 – Finnish technology company **Oy Stop Noise Finland Ltd** and **Suomen Erillisverkot Oy**, one of Europe's leading mission-critical communications operators, today announced a significant pre-order for the new **HYBRID X operating device**. The announcement was made at **Critical Communications World 2025**, held at Brussels Expo, where initial production deliveries were confirmed to begin in **Q4/2025**.

The **HYBRID X** operating device is designed for demanding operational environments where usability and fast, reliable communication are essential – even when touchscreens are inaccessible due to gloves or low visibility. Acting as an accessory to smartphones, HYBRID X operating device brings a physical-button user interface seamlessly into professional and mission-critical applications.

*"The HYBRID X operating device directly addresses the needs of our user base. In new mission-critical broadband networks, with frequently changing and updated end devices, end-user training will be a sustainable challenge. With HYBRID X, its user interface remains the same when changing devices, significantly reducing user training needs." said **Jarmo Vinkvist**, COO of Suomen Erillisverkot Oy. "It allows us to offer our customers a more intuitive and dependable way to control mission-critical applications. This pre-order supports our strategy to develop the future of secure communications based on real-world experience and field usability."*

*"This agreement is a major milestone in our journey to international markets," said **Markku Nieminen**, CEO of Oy Stop Noise Finland Ltd. "We are proud to see that the HYBRID X concept – bringing usability into the physical world as part of mobile applications – strongly resonates with mission-critical users."*

HYBRID X operating device - Bridging Physical Control with the Digital World

The HYBRID X operating device provides an open **API** for software developers, enabling applications to utilize its buttons for functions such as **push-to-talk**, **talk group selection**, **video activation**, or **emergency triggers**. The Hybrid X operating device connects via **USB-C** and is compatible with **Android-based smartphones**.

See HYBRID X operating device Live at CCW 2025 – Booth F30

HYBRID X operating device is available for hands-on demonstration at the **STOP NOISE booth F30** throughout **CCW 2025**, from June 17–19, 2025.
